

SEMINAR SERIES

Native Bees of the Bulkley Valley

Lynn Westcott
Westcott Environmental Services

Native bees are the most important pollinating insects in many of the world's ecosystems. Animals ranging from birds to grizzly bears to humans rely on the pollinating efforts of this diverse group of insects. This presentation will introduce the native bees known from the Bulkley Valley and provide an introduction to the bees' general biology and habitat requirements

Wednesday, April 30, 2014

LOCATION:
Northwest Community College
3966 2nd Avenue
Smithers

Free Admission. Bring your lunch.
